Registration for this event is required.
Please send your name and affiliation to: info@nyo.unep.org

Journey of the Universe tells for the first time the 14 billion year epic story of cosmic,
Earth, and human emergence,

Set in a day on the Greek island of Samos, the film weaves together scientific
discoveries in astronomy, geology, biology, and ecology with humanistic
insights from the world's cultures. With exquisite imagery, provocative
metaphors, and an enlivening musical score, the film invites us to embrace a
profound new participatory role in the flourishing of the Earth community.

"This is one of the most remarkable films I have ever seen."

- Tom Lovejoy

Heinz Center and George Mason University
